

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (currently amended): A pressure-sensitive adhesive tape comprising a supporting substrate and a pressure-sensitive adhesive layer formed on at least one side of the supporting substrate, the supporting substrate having an uneven portion on one side, wherein a maximum stress at an elongation of not more than 50 % of the pressure-sensitive adhesive tape is larger than the stress at break, wherein the elongation at break of the pressure-sensitive adhesive tape is from 100 to 300 %, wherein the substrate is formed from a resin composition comprising: high-density polyethylene and low-density polyethylene, said low-density polyethylene having a density equal to or less than  $0.919 \text{ g/cm}^3$ , wherein said high-density polyethylene and said low-density polyethylene are present in a weight percent ratio selected from the range of 10/90 to 90/10, and ~~a filler~~ an inorganic filler in an amount of not more than 5 parts by weight based on 100 parts by weight of the resin composition.

2. (previously presented): The pressure-sensitive adhesive tape according to claim 1, wherein the maximum stress at an elongation equal to or less than 50 % is at least 11 N/10 mm.

3.-4. (canceled).

5. (original): The pressure-sensitive adhesive tape according to claim 1, wherein the supporting substrate is transparent.

6. (previously presented): The pressure-sensitive adhesive tape according to claim 1, wherein the density of the low-density polyethylene is from  $0.880 \text{ g/cm}^3$  to  $0.919 \text{ g/cm}^3$ .

7. (previously presented): The pressure-sensitive adhesive tape according to claim 1, wherein the density of the low-density polyethylene is from  $0.910 \text{ g/cm}^3$  to  $0.919 \text{ g/cm}^3$ .

8. (previously presented): The pressure-sensitive adhesive tape according to claim 1, wherein the density of the high-density polyethylene is from  $0.940 \text{ g/cm}^3$  to  $0.970 \text{ g/cm}^3$ .

9. (previously presented): The pressure-sensitive adhesive tape according to claim 1, wherein the density of the high-density polyethylene is from  $0.950 \text{ g/cm}^3$  to  $0.965 \text{ g/cm}^3$ .
